

GrounUp Enterprise Specification

Phase 01 - Governance

Version 1.0.0-review | Review-ready | 2026-07-21

Purpose

Phase 01 establishes the enterprise governance and administration foundation for all later GrounUp capabilities.

Scope and Principles

- Multi-tenant organization governance
- Role and scope-based authorization
- Policy, configuration, approval, delegation, and segregation of duties
- Audit, classification, retention, legal hold, lifecycle, and change control
- AI action governance and controlled writeback

Functional Requirements

GOV-000001 - Multi-tenant organization model. The platform shall support multiple legal companies, business units, offices, departments, and projects within governed tenant boundaries. *Acceptance:* A tenant can contain a defined hierarchy while preventing unauthorized cross-tenant access.

GOV-000002 - Organization hierarchy. Every tenant shall maintain a versioned organization hierarchy with effective dates and ownership. *Acceptance:* Hierarchy changes preserve history and are visible in audit records.

GOV-000003 - Role-based access control. The platform shall authorize actions through governed roles and permissions. *Acceptance:* Every protected action resolves to an explicit permission decision.

GOV-000004 - Scoped permissions. Permissions shall be scopeable by tenant, company, office, department, project, record type, and owned record where applicable. *Acceptance:* Users cannot access records outside assigned scopes.

GOV-000005 - Segregation of duties. Sensitive workflows shall support incompatible-role and dual-approval controls. *Acceptance:* Configured conflicts block or route the action for independent approval.

GOV-000006 - User lifecycle governance. User invitation, activation, suspension, termination, and restoration shall follow controlled lifecycle states. *Acceptance:* Disabled users immediately lose interactive and API access while history is retained.

GOV-000007 - External user governance. Customers, vendors, subcontractors, consultants, and partners shall be represented as restricted external identities. *Acceptance:* External access is limited to explicitly shared records and portal capabilities.

GOV-000008 - Policy management. The platform shall support versioned policies with owners, effective dates, applicability, acknowledgment, and supersession. *Acceptance:* Only one applicable active version is effective for a given scope and date.

GOV-000009 - Configuration governance. Enterprise, tenant, company, office, project, and user configuration shall be layered with declared precedence. *Acceptance:* The effective value is reproducible and shows its source layer.

GOV-000010 - Approval framework. The platform shall provide configurable approval policies based on object, amount, risk, scope, role, and condition. *Acceptance:* Approval outcomes are immutable, attributable, timestamped, and auditable.

GOV-000011 - Delegation of authority. Authorized users shall be able to delegate approval authority for a defined scope and time period. *Acceptance:* Delegation never exceeds the delegator's authority and preserves attribution.

GOV-000012 - Audit trail. Material creation, access, change, approval, export, AI action, and administrative events shall be recorded in tamper-evident audit records. *Acceptance:* Audit events contain actor, action, object, time, source, before/after reference, and correlation identifier.

GOV-000013 - Data classification. Records and fields shall support governed data classifications and handling requirements. *Acceptance:* Classification drives access, export, retention, masking, and monitoring controls.

GOV-000014 - Retention and legal hold. The platform shall apply retention schedules and legal holds without destroying required evidence. *Acceptance:* Legal hold overrides ordinary deletion and retention expiration.

GOV-000015 - Record lifecycle. Governed records shall use explicit lifecycle states including draft, review, approved, active, suspended, superseded, archived, and deleted where applicable. *Acceptance:* Invalid state transitions are blocked and valid transitions are audited.

GOV-000016 - Change control. Locked specifications, policies, configurations, and master data shall change only through governed change requests. *Acceptance:* Approved changes include impact analysis, effective date, version increment, and rollback plan.

GOV-000017 - AI access governance. AI agents shall inherit explicit data and action permissions and shall not bypass user or system authorization. *Acceptance:* Every AI tool action is authorized, logged, and attributable to an agent and requesting context.

GOV-000018 - AI writeback approval. AI-generated changes to governed records shall create proposals unless an approved automation policy permits a narrower action. *Acceptance:* Proposal, reviewer, decision, evidence, and final writeback are traceable.

GOV-000019 - Administrative console. Authorized administrators shall manage organizations, users, roles, permissions, policies, configuration, approvals, retention, and audit from a governed console. *Acceptance:* Each administrative surface enforces permission, validation, and audit requirements.

GOV-000020 - Emergency access. Break-glass access shall require justification, limited duration, elevated logging, notification, and post-event review. *Acceptance:* Emergency access expires automatically and produces a review case.

GOV-000021 - Session and device governance. The platform shall support session, device, location, and authentication-risk policies. *Acceptance:* High-risk sessions can be challenged, restricted, or terminated.

GOV-000022 - Tenant provisioning. New tenants shall be provisioned from versioned templates with region, units, currency, language, industry packs, and policy defaults. *Acceptance:* Provisioning creates a reproducible deployment record and validation report.

GOV-000023 - License and entitlement management. Capabilities shall be controlled through plans, entitlements, feature flags, limits, and effective dates. *Acceptance:* Unauthorized or expired capabilities are inaccessible without data loss.

GOV-000024 - Notification governance. Governance events shall notify required owners, approvers, security personnel, or affected users based on policy. *Acceptance:* Notifications are deduplicated, logged, and escalated where required.

GOV-000025 - Governance reporting. The platform shall provide governance dashboards and reports for access, approvals, policy status, audit, retention, exceptions, and administrative changes. *Acceptance:* Reports reconcile to authoritative governance records and respect access scope.

Canonical Entities

ID	Entity	Purpose	Lifecycle	Owner
ENT-P01-001	Tenant	Top-level security and commercial boundary	provisioning; active; suspended; closed	Platform Administration
ENT-P01-002	OrganizationUnit	Hierarchical company, office, department, or division	draft; active; inactive; superseded	Platform Administration
ENT-P01-003	UserIdentity	Human or service identity	invited; active; suspended; terminated	Identity Administration
ENT-P01-004	Role	Named collection of permission grants	draft; active; deprecated	Security Governance
ENT-P01-005	Permission	Atomic allowed action	active; deprecated	Security Governance
ENT-P01-006	RoleAssignment	Assignment of role to identity and scope	pending; active; expired; revoked	Security Governance
ENT-P01-007	Policy	Governed policy identity	draft; active; retired	Compliance Governance
ENT-P01-008	PolicyVersion	Versioned policy content and applicability	draft; review; approved; active; superseded	Compliance Governance
ENT-P01-009	PolicyAcknowledgment	User acknowledgment evidence	recorded; revoked	Compliance Governance
ENT-P01-010	ConfigurationDefinition	Definition of a configurable key	draft; active; deprecated	Platform Administration
ENT-P01-011	ConfigurationValue	Value at a particular scope and time	draft; active; superseded	Platform Administration
ENT-P01-012	ApprovalPolicy	Rules for approval routing	draft; active; retired	Workflow Governance
ENT-P01-013	ApprovalRequest	Instance requiring governed decision	pending; approved; rejected; cancelled; expired	Workflow Governance
ENT-P01-014	ApprovalDecision	Immutable approval action	approved; rejected; abstained	Workflow Governance
ENT-P01-015	Delegation	Temporary authority delegation	draft; active; expired; revoked	Workflow Governance
ENT-P01-016	AuditEvent	Immutable governance event	recorded; archived	Audit Governance
ENT-P01-017	DataClassification	Governed classification and handling rules	draft; active; retired	Data Governance
ENT-P01-018	RetentionSchedule	Retention trigger and duration by record class	draft; active; retired	Records Governance
ENT-P01-019	LegalHold	Matter-based preservation requirement	active; released	Records Governance
ENT-P01-020	ChangeRequest	Controlled change to locked or governed artifacts	draft; submitted; approved; rejected; deprecated	Change Control Board
ENT-P01-021	EmergencyAccessGrant	Time-limited elevated access	requested; approved; active; expired; revoked	Security Governance
ENT-P01-022	Entitlement	Tenant capability entitlement	pending; active; suspended; expired	Commercial Operations
ENT-P01-023	AdministrativeCase	Governance exception or review case	open; investigating; remediated; closed	Risk and Compliance

Governance Workflows

WF-P01-001 - Tenant Provisioning. Actors: Platform Admin; Tenant Owner. States: Requested; Validating; Provisioning; Verification; Active; Failed. Output: Active tenant or remediation case.

WF-P01-002 - User Invitation and Activation. Actors: Admin; Invited User; Identity Provider. States: Draft; Sent; Accepted; Verified; Active; Expired; Cancelled. Output: Active governed identity.

WF-P01-003 - Role and Permission Change. Actors: Requester; Security Admin; Approver. States: Draft; Submitted; Risk Review; Approved; Applied; Rejected; Revoked. Output: Updated role assignment.

WF-P01-004 - Policy Publication. Actors: Policy Owner; Reviewer; Approver; Affected User. States: Draft; Review; Approved; Scheduled; Active; Superseded; Retired. Output: Active policy version.

WF-P01-005 - Approval Request. Actors: Requester; Routing Engine; Approver. States: Draft; Pending; In Review; Approved; Rejected; Cancelled; Expired. Output: Authorized or rejected action.

WF-P01-006 - Delegation. Actors: Delegator; Delegate; Approver. States: Draft; Submitted; Approved; Active; Expired; Revoked. Output: Active bounded delegation.

WF-P01-007 - Emergency Access. Actors: Requester; Security Approver; Reviewer. States: Requested; Approved; Active; Expired; Revoked; Under Review; Closed. Output: Closed emergency access case.

WF-P01-008 - Change Control. Actors: Author; Impact Reviewers; Change Control Board. States: Draft; Submitted; Impact Review; Approved; Rejected; Implementing; Verified; Closed. Output: Controlled successor version.

WF-P01-009 - Retention and Disposition. Actors: Records Manager; System; Legal Reviewer. States: Scheduled; Eligible; Hold Check; Approved; Disposed; Suppressed. Output: Disposed record or hold exception.

WF-P01-010 - AI Governance Proposal. Actors: User/Agent; Reviewer; Approver. States: Generated; Evidence Check; Submitted; Review; Approved; Rejected; Applied. Output: Approved writeback or rejected proposal.

AI Governance

AI agents are governed identities. They cannot bypass tenant isolation, explicit denial, segregation of duties, legal hold, locked baseline protection, approval, or audit requirements.

Test Plan

TEST-P01-001 (GOV-000001): Cross-tenant isolation. Expected: Request denied and audit event recorded.

TEST-P01-002 (GOV-000003): Permission grant. Expected: Authorized project action succeeds; other projects remain denied.

TEST-P01-003 (GOV-000005): Segregation of duties. Expected: Approval blocked with conflict reason.

TEST-P01-004 (GOV-000006): User suspension. Expected: All sessions revoked; sign-in blocked; history retained.

TEST-P01-005 (GOV-000008): Policy overlap. Expected: Activation blocked until replacement transaction resolves overlap.

TEST-P01-006 (GOV-000009): Configuration precedence. Expected: Highest authorized active layer returned with source lineage.

TEST-P01-007 (GOV-000010): Approval routing. Expected: Correct stages and eligible approvers generated.

TEST-P01-008 (GOV-000012): Audit completeness. Expected: Audit event includes actor, action, object, time, before/after reference, correlation.

TEST-P01-009 (GOV-000014): Legal hold. Expected: Purge suppressed and exception logged.

TEST-P01-010 (GOV-000016): Locked baseline change. Expected: Edit rejected; change request path offered.

TEST-P01-011 (GOV-000017): AI authorization. Expected: Action denied and agent/tool audit event recorded.

TEST-P01-012 (GOV-000018): AI proposal approval. Expected: Writeback occurs only after approval and preserves evidence.

TEST-P01-013 (GOV-000020): Break-glass expiry. Expected: Access automatically revoked and review case opened.

TEST-P01-014 (GOV-000022): Tenant provisioning. Expected: Tenant, owner, defaults, entitlements, and validation report created.

TEST-P01-015 (GOV-000023): Entitlement expiration. Expected: New use blocked; historical records remain readable per policy.
