

GrounUp Enterprise Specification

Phase 10

Enterprise Financial Management & Accounting

Version 1.0.0 | Review-ready | Proposed lock tag GES-P10-v1.0.0

Document ID	GES-P10-001
Owner	GrounUp Product and Finance Governance
Classification	Controlled Enterprise Specification
Dependencies	GES Phases 01-09
Status	Review-ready

Document Control

This PDF is the controlled human-readable companion to the machine-readable Phase 10 artifacts. The complete CSV registers, schemas, OpenAPI file, workbook, and traceability matrix are authoritative coordinated package components.

Artifact	Count

Validation rules	40
Workflows	20
Engines	25
API endpoints	32
UI/UX surfaces	18
Reports	18
KPIs	30
Mapped test cases	240

Executive Summary

Phase 10 defines a construction-specific financial management and accounting platform that converts approved operational events into controlled financial records. The design integrates project estimating, contracts, field production, workforce, equipment, procurement, billing, cash, and statutory obligations while preserving complete source-to-statement traceability.

Scope and Objectives

The phase covers financial core and governance, general ledger, accounts payable, accounts receivable, construction billing, job cost, commitments, budgeting, forecasting, WIP and revenue recognition, payroll accounting integration, cash and treasury, banking, fixed assets, tax support, consolidation, reporting, AI finance, portals, mobile approvals, integrations, deployment, and testing.

Architecture Principles

The platform is multi-tenant, multi-company, event-driven, API-first, auditable, configurable, white-label capable, and AI-native. Financial postings are immutable. Corrections use reversals and governed adjustments. Operational systems remain the source of approved business events while the financial ledger remains the source of posted accounting truth.

Financial Digital Twin

The Financial Digital Twin continuously combines estimates, contract values, approved changes, project production, labor and equipment costs, procurement commitments, invoices, billing, collections, payroll, cash, assets, tax, forecasts, WIP, and risk signals. It presents current state, historical reconstruction, scenario forecasts, and source-linked exceptions without replacing the general ledger.

General Ledger and Close

The general ledger supports configurable charts of accounts, accounting dimensions, journal workflows, recurring entries, allocations, intercompany accounting, eliminations, consolidations, fiscal calendars, period locks, trial balance snapshots, close checklists, and audit evidence. Every posted batch must balance and retain origin lineage.

Accounts Payable and Payments

AP supports capture, duplicate detection, coding, purchase order and receipt matching, tax and retainage, approval routing, payment terms, payment batches, ACH/check/wire controls, positive pay, vendor aging, information-reporting readiness, and vendor portal visibility. Vendor bank changes require enhanced verification and segregation of duties.

Accounts Receivable and Collections

AR supports progress, T&M, unit-price, milestone, and standard invoicing; cash receipts; application; retainage; credit limits; disputes; collections; aging; and bad debt support. Billing records connect directly to contracts, schedules of values, approved quantities, customer communications, and project financial forecasts.

Job Cost, Forecasting, and WIP

Job cost captures labor, equipment, material, subcontract, burden, overhead, accrual, commitment, and adjustment transactions by project and controlled dimensions. Forecasts maintain version history and approval. WIP calculates earned revenue and over/under billings using approved methods, source evidence, and period-specific snapshots.

Payroll, Union, and Prevailing Wage Accounting

Phase 09 remains the workforce system of record. Phase 10 receives approved payroll distributions, burdens, union fringe liabilities, prevailing-wage adjustments, deductions, certified payroll records, and accruals. Payroll batches must reconcile to payroll control totals, project job cost, liabilities, cash, and the general ledger.

Cash, Treasury, and Banking

Treasury functions include bank master records, statement imports, reconciliations, cash positions, forecasts, transfers, payment controls, lockbox support, and exception management. Cash forecasts combine expected receipts, approved disbursements, payroll, taxes, commitments, and scenario assumptions.

Fixed Assets and Tax

Fixed assets support capitalization, multiple books, depreciation, transfers, impairment, disposals, and reconciliation to fleet and equipment records. Tax capabilities provide governed calculation and workpaper support for sales/use, fuel, property, payroll, and information reporting; statutory filing remains subject to authorized human review.

AI Financial Intelligence

AI can recommend invoice coding, match candidates, anomaly flags, forecast scenarios, variance explanations, collection priorities, cash actions, and executive narratives. High-impact actions remain human-controlled. AI records confidence, source references, assumptions, model version, prompt version, decision, and outcome feedback.

Security and Internal Control

Controls include least privilege, tenant isolation, segregation of duties, approval thresholds, dual control for payments and banking changes, encryption, audit logging, evidence retention, anomaly monitoring, export governance, and emergency-access review. Sensitive financial and personal data is minimized and access is logged.

Integration and Migration

Phase 10 consumes governed records from Phases 03-09 and publishes financial results through APIs and events. Imports are staged, validated, balanced, approved, and reconciled. Cutover requires signed opening balances and parallel reconciliation. Integrations must be idempotent, observable, retry-safe, and replayable.

Testing and Acceptance

Acceptance requires requirement-mapped tests, subledger-to-ledger reconciliation, security and segregation tests, closed-period controls, workflow and approval tests, performance and volume tests, migration reconciliation, report tie-outs, AI governance tests, mobile revalidation, disaster recovery, and signed business UAT.

Functional Domain Catalog

Code	Domain	Scope
FIN-COR E	Financial Core & Governance	multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls
GL	General Ledger	journal entries, recurring journals, allocations, intercompany, consolidation, trial balance, and close
AP	Accounts Payable	vendor invoices, credits, approval, three-way match, retainage, payment processing, and 1099 readiness
AR	Accounts Receivable	customer invoicing, cash receipts, collections, credit controls, retainage, and aging
JC	Job Cost & WIP	cost codes, commitments, actuals, forecasts, earned revenue, WIP, and over/under billings
BILL	Construction Billing	AIA-style progress billing, schedule of values, T&M;, unit price, milestone, stored materials, and lien controls
PAY	Payroll Accounting Integration	labor distribution, burdens, union fringes, prevailing wage, certified payroll, and payroll posting
CASH	Cash & Treasury	bank accounts, reconciliation, cash positioning, payment controls, positive pay, and cash forecasting
BUD	Budgeting & Forecasting	annual budgets, project forecasts, scenario modeling, rolling forecasts, and management approvals
FA	Fixed Assets	capitalization, depreciation, transfers, disposals, impairment, and asset-to-fleet reconciliation
TAX	Tax & Regulatory Finance	sales/use tax, fuel tax, property tax, information reporting, and audit support
PROC	Procurement Finance	purchase orders, commitments, receipts, invoice match, subcontract compliance, and budget consumption
REV	Revenue Recognition	contract value, approved changes, percent complete, earned revenue, and revenue adjustments
INT	Integrations & Data Exchange	banking, payment processors, payroll, tax, ERP export, and controlled import/export
AI	AI Financial Intelligence	coding recommendations, anomaly detection, forecasting, narrative reporting, and governed approvals
SEC	Security, Audit & Compliance	segregation of duties, approvals, audit evidence, retention, privacy, and tenant isolation

Representative Controlled Requirements

ID	Module	Requirement	Priority
GES-P10-REQ-001	Financial Core & Governance	The platform shall maintain tenant-scoped multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls.	Must
GES-P10-REQ-002	Financial Core & Governance	The platform shall support configurable approval thresholds and routing for multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls.	Must
GES-P10-REQ-003	Financial Core & Governance	The platform shall create an immutable audit event for every create, update, approve, post, reverse, export, and delete action involving multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls.	Should
GES-P10-REQ-004	Financial Core & Governance	The platform shall enforce role-based and attribute-based access controls for multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls.	Must
GES-P10-REQ-005	Financial Core & Governance	The platform shall support effective dating, versioning, and historical reconstruction of multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls.	Must
GES-P10-REQ-006	Financial Core & Governance	The platform shall validate source-to-ledger balance and reject unbalanced transactions involving multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls.	Must
GES-P10-REQ-007	Financial Core & Governance	The platform shall provide configurable statuses and state transitions for multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls.	Should
GES-P10-REQ-008	Financial Core & Governance	The platform shall expose governed APIs and event notifications for multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls.	Must
GES-P10-REQ-009	Financial Core & Governance	The platform shall provide dashboards, drill-downs, and exportable reports for multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls.	Must
GES-P10-REQ-010	Financial Core & Governance	The platform shall support attachments, notes, evidence, and source-document lineage for multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls.	Must
GES-P10-REQ-011	Financial Core & Governance	The platform shall support multi-company and intercompany processing where applicable to multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls.	Should
GES-P10-REQ-012	Financial Core & Governance	The platform shall support configurable accounting dimensions including company, project, department, cost code, equipment, customer, vendor, and location for multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls.	Must
GES-P10-REQ-013	Financial Core & Governance	The platform shall detect duplicates, anomalies, missing data, and policy exceptions involving multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls.	Must
GES-P10-REQ-014	Financial Core & Governance	The platform shall support period controls, cutoff validation, and posting-date governance for multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls.	Must
GES-P10-REQ-015	Financial Core & Governance	The platform shall preserve traceability from originating operational transaction through final financial statement impact for multi-company, multi-entity, fiscal calendars, chart of accounts, periods, currencies, and financial controls.	Should
