

Phase 11

Enterprise Procurement, Supply Chain & Inventory Management

GES-P11-001 | Version 1.0.0 | Review-ready
Proposed Lock Tag: GES-P11-v1.0.0

1. Executive Specification

Phase 11 establishes the governed enterprise procurement and supply-chain operating layer for GrounUp. It connects estimate demand, project schedules, suppliers, subcontractors, purchase commitments, warehouses, inventory, receiving, rentals, logistics, invoice matching and financial controls into a tenant-safe, configurable and AI-native platform.

1.1 Outcomes

- Complete requisition-to-payment readiness with Phase 10 accounting integration.
- Proactive long-lead, shortage, price and supplier-risk management.
- Mobile and offline receiving, warehouse and field material workflows.
- A live Supply Chain Digital Twin with explainable recommendations.
- White-label, OEM/reseller and no-code configuration support.

2. Scope and Module Architecture

Procurement Planning

Demand planning, procurement schedules, long-lead strategy, budget and commitment controls.

Supplier Management

Supplier onboarding, classification, prequalification, compliance, risk and performance.

Strategic Sourcing

RFIs, RFQs, RFPs, bid leveling, negotiation, award and sourcing events.

Purchase Requisitions

Field, office, project, emergency, rental and replenishment requests with approvals.

Purchase Orders

Standard, blanket, release, service, rental, material and change-order purchase orders.

Subcontract Procurement

Bid invitations, scope leveling, subcontract awards, compliance and change control.

Inventory Control

Stock, non-stock, bulk, serialized, lot-controlled, consumable and project inventory.

Warehouse Operations

Receiving, put-away, picking, packing, transfers, shipping and cycle counts.

Material Receiving

Delivery appointments, inspections, quantities, photos, damages, returns and backorders.

Construction Logistics

Delivery windows, route plans, laydown areas, crane picks and just-in-time sequencing.

Rental Management

Rental requests, contracts, mobilization, utilization, damage, fuel and off-rent control.

Catalog and Item Master

Items, materials, substitutions, units, manufacturers, pricing and approved sources.

Procure-to-Pay Integration

Three-way match, invoice exceptions, accruals, commitments and payment readiness.

Supply Chain Analytics

Lead times, savings, stockouts, turnover, forecast accuracy and supplier scorecards.

AI Procurement Intelligence

Demand forecasts, alternate-source recommendations, anomaly detection and explainability.

Supply Chain Digital Twin

Live model of demand, commitments, stock, logistics, risk, cost and schedule impact.

3. Core Governance and Controls

- Tenant isolation and company/project security trimming
- Delegated approval and amount authority
- Budget and commitment validation
- Supplier compliance and insurance controls
- Segregation of duties for request, approval, award, receipt and match
- Append-only inventory transaction history
- Idempotent integration and auditable overrides
- Human approval of AI recommendations with financial or contractual impact

4. Controlled Artifact Metrics

Artifact	Count
Requirements	260
Entities	120
Data Dictionary Fields	160
Business Rules	45
Validation Rules	45
Workflows	24
Engines	30
Apis	36
Ui Surfaces	22
Reports	20
Kpis	35
Tests	260

5. Workflow Catalog

P11-WF-001 - Supplier Onboarding

Governed end-to-end workflow for supplier onboarding.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-002 - Supplier Prequalification

Governed end-to-end workflow for supplier prequalification.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-003 - Sourcing Event

Governed end-to-end workflow for sourcing event.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-004 - RFQ to Award

Governed end-to-end workflow for rfq to award.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-005 - Purchase Requisition Approval

Governed end-to-end workflow for purchase requisition approval.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-006 - Emergency Purchase

Governed end-to-end workflow for emergency purchase.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-007 - PO Creation and Approval

Governed end-to-end workflow for po creation and approval.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-008 - PO Change Control

Governed end-to-end workflow for po change control.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-009 - Blanket PO Release

Governed end-to-end workflow for blanket po release.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-010 - Subcontract Bid and Award

Governed end-to-end workflow for subcontract bid and award.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-011 - Material Demand to Requisition

Governed end-to-end workflow for material demand to requisition.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-012 - Receiving and Inspection

Governed end-to-end workflow for receiving and inspection.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-013 - Damage and Return

Governed end-to-end workflow for damage and return.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-014 - Inventory Replenishment

Governed end-to-end workflow for inventory replenishment.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-015 - Inventory Transfer

Governed end-to-end workflow for inventory transfer.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-016 - Cycle Count and Adjustment

Governed end-to-end workflow for cycle count and adjustment.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-017 - Rental Request to Off-Rent

Governed end-to-end workflow for rental request to off-rent.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-018 - Delivery and Logistics Planning

Governed end-to-end workflow for delivery and logistics planning.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-019 - Three-Way Match Exception

Governed end-to-end workflow for three-way match exception.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-020 - Supplier Performance Review

Governed end-to-end workflow for supplier performance review.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-021 - Long-Lead Item Control

Governed end-to-end workflow for long-lead item control.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-022 - AI Recommendation Review

Governed end-to-end workflow for ai recommendation review.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-023 - Supply Disruption Response

Governed end-to-end workflow for supply disruption response.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

P11-WF-024 - Procurement Closeout

Governed end-to-end workflow for procurement closeout.

State model: Requested > Validated > Reviewed > Approved > Executed > Reconciled > Closed

6. Engine and AI Architecture

P11-ENG-001 - Procurement Planning Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for procurement planning engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-002 - Demand Forecast Engine

Type: AI-assisted. Processes governed Phase 11 inputs to produce explainable, auditable outputs for demand forecast engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-003 - Replenishment Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for replenishment engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-004 - Strategic Sourcing Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for strategic sourcing engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-005 - Bid Leveling Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for bid leveling engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-006 - Supplier Risk Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for supplier risk engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-007 - Supplier Performance Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for supplier performance engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-008 - Supplier Compliance Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for supplier compliance engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-009 - Approval Routing Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for approval routing engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-010 - Budget and Commitment Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for budget and commitment engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-011 - Purchase Order Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for purchase order engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-012 - Subcontract Procurement Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for subcontract procurement engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-013 - Item and Catalog Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for item and catalog engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-014 - Inventory Availability Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for inventory availability engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-015 - Inventory Valuation Interface

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for inventory valuation interface. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-016 - Warehouse Execution Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for warehouse execution engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-017 - Receiving Match Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for receiving match engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-018 - Logistics Scheduling Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for logistics scheduling engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-019 - Route Optimization Engine

Type: AI-assisted. Processes governed Phase 11 inputs to produce explainable, auditable outputs for route optimization engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-020 - Rental Optimization Engine

Type: AI-assisted. Processes governed Phase 11 inputs to produce explainable, auditable outputs for rental optimization engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-021 - Price Intelligence Engine

Type: AI-assisted. Processes governed Phase 11 inputs to produce explainable, auditable outputs for price intelligence engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-022 - Lead-Time Prediction Engine

Type: AI-assisted. Processes governed Phase 11 inputs to produce explainable, auditable outputs for lead-time prediction engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-023 - Three-Way Match Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for three-way match engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-024 - Procurement Anomaly Engine

Type: AI-assisted. Processes governed Phase 11 inputs to produce explainable, auditable outputs for procurement anomaly engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-025 - Contract Compliance Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for contract compliance engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-026 - Substitution Recommendation Engine

Type: AI-assisted. Processes governed Phase 11 inputs to produce explainable, auditable outputs for substitution recommendation engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-027 - Supply Disruption Engine

Type: Deterministic. Processes governed Phase 11 inputs to produce explainable, auditable outputs for supply disruption engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-028 - Supply Chain Digital Twin Engine

Type: AI-assisted. Processes governed Phase 11 inputs to produce explainable, auditable outputs for supply chain digital twin engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-029 - Procurement Copilot Engine

Type: AI-assisted. Processes governed Phase 11 inputs to produce explainable, auditable outputs for procurement copilot engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

P11-ENG-030 - Executive Supply Chain Intelligence Engine

Type: AI-assisted. Processes governed Phase 11 inputs to produce explainable, auditable outputs for executive supply chain intelligence engine. Human approval required for commitments, awards, substitutions and financial-impacting actions.

7. Data and Integration Architecture

Phase 11 reuses enterprise tenant, identity, company, project, cost-code, document, audit and configuration services. Phase 05 supplies estimate demand; Phase 07 supplies schedules, project requests and production; Phase 09 supplies requestor and crew context; Phase 10 receives commitments, accruals, invoice-match status and payment readiness. All interfaces are versioned and idempotent.

8. API and UI Architecture

The API catalog contains 36 governed resources. The UI catalog contains 22 role-oriented web, portal and mobile surfaces. Offline transactions use device identity, local queues, conflict policies and server-side revalidation before commitment.

9. Reporting and KPIs

Twenty reports and thirty-five KPIs provide operational, project, warehouse, supplier, financial and executive visibility. Definitions are controlled in the accompanying CSV register and Excel control workbook.

10. Security, Privacy and AI Governance

- Least-privilege role and attribute-based access
- Sensitive supplier banking data separated from general vendor data
- Immutable audit events for approval, award, receipt, adjustment and override
- AI provenance, confidence, explanation and user-decision capture
- No autonomous awards, contracts, purchase commitments, substitutions or payments
- Retention and legal-hold controls inherited from Phase 01 governance

11. Testing and Acceptance

Every controlled requirement maps to a test case. Release requires successful functional, workflow, integration, security, mobile/offline, data-reconciliation, performance and AI-governance testing plus signed approval records.

12. Deployment and Locking

Deployment proceeds through configuration, master-data preparation, interface validation, pilot, parallel reconciliation, UAT, approval and configuration lock. The proposed lock tag is GES-P11-v1.0.0.

Appendix A - Requirement Register

P11-REQ-001 | Procurement Planning | High

The platform shall create and govern master records for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-002 | Procurement Planning | High

The platform shall validate and route status transitions for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-003 | Procurement Planning | High

The platform shall calculate and display project and cost-code links for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-004 | Procurement Planning | High

The platform shall monitor and alert on exceptions and overrides for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-005 | Procurement Planning | High

The platform shall approve and audit integration events for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-006 | Procurement Planning | High

The platform shall synchronize and reconcile mobile/offline records for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-007 | Procurement Planning | Medium

The platform shall forecast and optimize compliance evidence for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-008 | Procurement Planning | Medium

The platform shall secure and retain transactions for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-009 | Procurement Planning | Medium

The platform shall import and export approval thresholds for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-010 | Procurement Planning | Medium

The platform shall configure without code documents and attachments for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-011 | Procurement Planning | Medium

The platform shall create and govern role-based views for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-012 | Procurement Planning | Medium

The platform shall validate and route historical versions for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-013 | Procurement Planning | Medium

The platform shall calculate and display AI recommendations for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-014 | Procurement Planning | Medium

The platform shall monitor and alert on master records for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-015 | Procurement Planning | Medium

The platform shall approve and audit status transitions for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-016 | Procurement Planning | Medium

The platform shall synchronize and reconcile project and cost-code links for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-017 | Procurement Planning | Medium

The platform shall forecast and optimize exceptions and overrides for procurement planning.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-018 | Supplier Management | High

The platform shall validate and route transactions for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-019 | Supplier Management | High

The platform shall calculate and display approval thresholds for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-020 | Supplier Management | High

The platform shall monitor and alert on documents and attachments for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-021 | Supplier Management | High

The platform shall approve and audit role-based views for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-022 | Supplier Management | High

The platform shall synchronize and reconcile historical versions for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-023 | Supplier Management | High

The platform shall forecast and optimize AI recommendations for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-024 | Supplier Management | Medium

The platform shall secure and retain master records for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-025 | Supplier Management | Medium

The platform shall import and export status transitions for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-026 | Supplier Management | Medium

The platform shall configure without code project and cost-code links for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-027 | Supplier Management | Medium

The platform shall create and govern exceptions and overrides for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-028 | Supplier Management | Medium

The platform shall validate and route integration events for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-029 | Supplier Management | Medium

The platform shall calculate and display mobile/offline records for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-030 | Supplier Management | Medium

The platform shall monitor and alert on compliance evidence for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-031 | Supplier Management | Medium

The platform shall approve and audit transactions for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-032 | Supplier Management | Medium

The platform shall synchronize and reconcile approval thresholds for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-033 | Supplier Management | Medium

The platform shall forecast and optimize documents and attachments for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-034 | Supplier Management | Medium

The platform shall secure and retain role-based views for supplier management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-035 | Strategic Sourcing | High

The platform shall calculate and display status transitions for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-036 | Strategic Sourcing | High

The platform shall monitor and alert on project and cost-code links for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-037 | Strategic Sourcing | High

The platform shall approve and audit exceptions and overrides for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-038 | Strategic Sourcing | High

The platform shall synchronize and reconcile integration events for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-039 | Strategic Sourcing | High

The platform shall forecast and optimize mobile/offline records for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-040 | Strategic Sourcing | High

The platform shall secure and retain compliance evidence for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-041 | Strategic Sourcing | Medium

The platform shall import and export transactions for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-042 | Strategic Sourcing | Medium

The platform shall configure without code approval thresholds for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-043 | Strategic Sourcing | Medium

The platform shall create and govern documents and attachments for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-044 | Strategic Sourcing | Medium

The platform shall validate and route role-based views for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-045 | Strategic Sourcing | Medium

The platform shall calculate and display historical versions for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-046 | Strategic Sourcing | Medium

The platform shall monitor and alert on AI recommendations for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-047 | Strategic Sourcing | Medium

The platform shall approve and audit master records for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-048 | Strategic Sourcing | Medium

The platform shall synchronize and reconcile status transitions for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-049 | Strategic Sourcing | Medium

The platform shall forecast and optimize project and cost-code links for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-050 | Strategic Sourcing | Medium

The platform shall secure and retain exceptions and overrides for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-051 | Strategic Sourcing | Medium

The platform shall import and export integration events for strategic sourcing.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-052 | Purchase Requisitions | High

The platform shall monitor and alert on approval thresholds for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-053 | Purchase Requisitions | High

The platform shall approve and audit documents and attachments for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-054 | Purchase Requisitions | High

The platform shall synchronize and reconcile role-based views for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-055 | Purchase Requisitions | High

The platform shall forecast and optimize historical versions for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-056 | Purchase Requisitions | High

The platform shall secure and retain AI recommendations for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-057 | Purchase Requisitions | High

The platform shall import and export master records for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-058 | Purchase Requisitions | Medium

The platform shall configure without code status transitions for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-059 | Purchase Requisitions | Medium

The platform shall create and govern project and cost-code links for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-060 | Purchase Requisitions | Medium

The platform shall validate and route exceptions and overrides for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-061 | Purchase Requisitions | Medium

The platform shall calculate and display integration events for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-062 | Purchase Requisitions | Medium

The platform shall monitor and alert on mobile/offline records for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-063 | Purchase Requisitions | Medium

The platform shall approve and audit compliance evidence for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-064 | Purchase Requisitions | Medium

The platform shall synchronize and reconcile transactions for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-065 | Purchase Requisitions | Medium

The platform shall forecast and optimize approval thresholds for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-066 | Purchase Requisitions | Medium

The platform shall secure and retain documents and attachments for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-067 | Purchase Requisitions | Medium

The platform shall import and export role-based views for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-068 | Purchase Requisitions | Medium

The platform shall configure without code historical versions for purchase requisitions.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-069 | Purchase Orders | High

The platform shall approve and audit project and cost-code links for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-070 | Purchase Orders | High

The platform shall synchronize and reconcile exceptions and overrides for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-071 | Purchase Orders | High

The platform shall forecast and optimize integration events for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-072 | Purchase Orders | High

The platform shall secure and retain mobile/offline records for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-073 | Purchase Orders | High

The platform shall import and export compliance evidence for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-074 | Purchase Orders | High

The platform shall configure without code transactions for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-075 | Purchase Orders | Medium

The platform shall create and govern approval thresholds for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-076 | Purchase Orders | Medium

The platform shall validate and route documents and attachments for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-077 | Purchase Orders | Medium

The platform shall calculate and display role-based views for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-078 | Purchase Orders | Medium

The platform shall monitor and alert on historical versions for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-079 | Purchase Orders | Medium

The platform shall approve and audit AI recommendations for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-080 | Purchase Orders | Medium

The platform shall synchronize and reconcile master records for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-081 | Purchase Orders | Medium

The platform shall forecast and optimize status transitions for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-082 | Purchase Orders | Medium

The platform shall secure and retain project and cost-code links for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-083 | Purchase Orders | Medium

The platform shall import and export exceptions and overrides for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-084 | Purchase Orders | Medium

The platform shall configure without code integration events for purchase orders.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-085 | Subcontract Procurement | High

The platform shall synchronize and reconcile documents and attachments for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-086 | Subcontract Procurement | High

The platform shall forecast and optimize role-based views for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-087 | Subcontract Procurement | High

The platform shall secure and retain historical versions for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-088 | Subcontract Procurement | High

The platform shall import and export AI recommendations for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-089 | Subcontract Procurement | High

The platform shall configure without code master records for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-090 | Subcontract Procurement | High

The platform shall create and govern status transitions for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-091 | Subcontract Procurement | Medium

The platform shall validate and route project and cost-code links for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-092 | Subcontract Procurement | Medium

The platform shall calculate and display exceptions and overrides for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-093 | Subcontract Procurement | Medium

The platform shall monitor and alert on integration events for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-094 | Subcontract Procurement | Medium

The platform shall approve and audit mobile/offline records for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-095 | Subcontract Procurement | Medium

The platform shall synchronize and reconcile compliance evidence for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-096 | Subcontract Procurement | Medium

The platform shall forecast and optimize transactions for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-097 | Subcontract Procurement | Medium

The platform shall secure and retain approval thresholds for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-098 | Subcontract Procurement | Medium

The platform shall import and export documents and attachments for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-099 | Subcontract Procurement | Medium

The platform shall configure without code role-based views for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-100 | Subcontract Procurement | Medium

The platform shall create and govern historical versions for subcontract procurement.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-101 | Inventory Control | High

The platform shall forecast and optimize exceptions and overrides for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-102 | Inventory Control | High

The platform shall secure and retain integration events for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-103 | Inventory Control | High

The platform shall import and export mobile/offline records for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-104 | Inventory Control | High

The platform shall configure without code compliance evidence for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-105 | Inventory Control | High

The platform shall create and govern transactions for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-106 | Inventory Control | High

The platform shall validate and route approval thresholds for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-107 | Inventory Control | Medium

The platform shall calculate and display documents and attachments for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-108 | Inventory Control | Medium

The platform shall monitor and alert on role-based views for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-109 | Inventory Control | Medium

The platform shall approve and audit historical versions for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-110 | Inventory Control | Medium

The platform shall synchronize and reconcile AI recommendations for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-111 | Inventory Control | Medium

The platform shall forecast and optimize master records for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-112 | Inventory Control | Medium

The platform shall secure and retain status transitions for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-113 | Inventory Control | Medium

The platform shall import and export project and cost-code links for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-114 | Inventory Control | Medium

The platform shall configure without code exceptions and overrides for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-115 | Inventory Control | Medium

The platform shall create and govern integration events for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-116 | Inventory Control | Medium

The platform shall validate and route mobile/offline records for inventory control.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-117 | Warehouse Operations | High

The platform shall secure and retain role-based views for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-118 | Warehouse Operations | High

The platform shall import and export historical versions for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-119 | Warehouse Operations | High

The platform shall configure without code AI recommendations for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-120 | Warehouse Operations | High

The platform shall create and govern master records for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-121 | Warehouse Operations | High

The platform shall validate and route status transitions for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-122 | Warehouse Operations | High

The platform shall calculate and display project and cost-code links for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-123 | Warehouse Operations | Medium

The platform shall monitor and alert on exceptions and overrides for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-124 | Warehouse Operations | Medium

The platform shall approve and audit integration events for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-125 | Warehouse Operations | Medium

The platform shall synchronize and reconcile mobile/offline records for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-126 | Warehouse Operations | Medium

The platform shall forecast and optimize compliance evidence for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-127 | Warehouse Operations | Medium

The platform shall secure and retain transactions for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-128 | Warehouse Operations | Medium

The platform shall import and export approval thresholds for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-129 | Warehouse Operations | Medium

The platform shall configure without code documents and attachments for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-130 | Warehouse Operations | Medium

The platform shall create and govern role-based views for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-131 | Warehouse Operations | Medium

The platform shall validate and route historical versions for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-132 | Warehouse Operations | Medium

The platform shall calculate and display AI recommendations for warehouse operations.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-133 | Material Receiving | High

The platform shall import and export integration events for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-134 | Material Receiving | High

The platform shall configure without code mobile/offline records for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-135 | Material Receiving | High

The platform shall create and govern compliance evidence for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-136 | Material Receiving | High

The platform shall validate and route transactions for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-137 | Material Receiving | High

The platform shall calculate and display approval thresholds for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-138 | Material Receiving | High

The platform shall monitor and alert on documents and attachments for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-139 | Material Receiving | Medium

The platform shall approve and audit role-based views for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-140 | Material Receiving | Medium

The platform shall synchronize and reconcile historical versions for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-141 | Material Receiving | Medium

The platform shall forecast and optimize AI recommendations for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-142 | Material Receiving | Medium

The platform shall secure and retain master records for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-143 | Material Receiving | Medium

The platform shall import and export status transitions for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-144 | Material Receiving | Medium

The platform shall configure without code project and cost-code links for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-145 | Material Receiving | Medium

The platform shall create and govern exceptions and overrides for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-146 | Material Receiving | Medium

The platform shall validate and route integration events for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-147 | Material Receiving | Medium

The platform shall calculate and display mobile/offline records for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-148 | Material Receiving | Medium

The platform shall monitor and alert on compliance evidence for material receiving.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-149 | Construction Logistics | High

The platform shall configure without code historical versions for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-150 | Construction Logistics | High

The platform shall create and govern AI recommendations for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-151 | Construction Logistics | High

The platform shall validate and route master records for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-152 | Construction Logistics | High

The platform shall calculate and display status transitions for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-153 | Construction Logistics | High

The platform shall monitor and alert on project and cost-code links for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-154 | Construction Logistics | High

The platform shall approve and audit exceptions and overrides for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-155 | Construction Logistics | Medium

The platform shall synchronize and reconcile integration events for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-156 | Construction Logistics | Medium

The platform shall forecast and optimize mobile/offline records for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-157 | Construction Logistics | Medium

The platform shall secure and retain compliance evidence for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-158 | Construction Logistics | Medium

The platform shall import and export transactions for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-159 | Construction Logistics | Medium

The platform shall configure without code approval thresholds for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-160 | Construction Logistics | Medium

The platform shall create and govern documents and attachments for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-161 | Construction Logistics | Medium

The platform shall validate and route role-based views for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-162 | Construction Logistics | Medium

The platform shall calculate and display historical versions for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-163 | Construction Logistics | Medium

The platform shall monitor and alert on AI recommendations for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-164 | Construction Logistics | Medium

The platform shall approve and audit master records for construction logistics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-165 | Rental Management | High

The platform shall create and govern mobile/offline records for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-166 | Rental Management | High

The platform shall validate and route compliance evidence for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-167 | Rental Management | High

The platform shall calculate and display transactions for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-168 | Rental Management | High

The platform shall monitor and alert on approval thresholds for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-169 | Rental Management | High

The platform shall approve and audit documents and attachments for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-170 | Rental Management | High

The platform shall synchronize and reconcile role-based views for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-171 | Rental Management | Medium

The platform shall forecast and optimize historical versions for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-172 | Rental Management | Medium

The platform shall secure and retain AI recommendations for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-173 | Rental Management | Medium

The platform shall import and export master records for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-174 | Rental Management | Medium

The platform shall configure without code status transitions for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-175 | Rental Management | Medium

The platform shall create and govern project and cost-code links for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-176 | Rental Management | Medium

The platform shall validate and route exceptions and overrides for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-177 | Rental Management | Medium

The platform shall calculate and display integration events for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-178 | Rental Management | Medium

The platform shall monitor and alert on mobile/offline records for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-179 | Rental Management | Medium

The platform shall approve and audit compliance evidence for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-180 | Rental Management | Medium

The platform shall synchronize and reconcile transactions for rental management.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-181 | Catalog and Item Master | High

The platform shall validate and route AI recommendations for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-182 | Catalog and Item Master | High

The platform shall calculate and display master records for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-183 | Catalog and Item Master | High

The platform shall monitor and alert on status transitions for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-184 | Catalog and Item Master | High

The platform shall approve and audit project and cost-code links for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-185 | Catalog and Item Master | High

The platform shall synchronize and reconcile exceptions and overrides for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-186 | Catalog and Item Master | High

The platform shall forecast and optimize integration events for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-187 | Catalog and Item Master | Medium

The platform shall secure and retain mobile/offline records for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-188 | Catalog and Item Master | Medium

The platform shall import and export compliance evidence for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-189 | Catalog and Item Master | Medium

The platform shall configure without code transactions for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-190 | Catalog and Item Master | Medium

The platform shall create and govern approval thresholds for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-191 | Catalog and Item Master | Medium

The platform shall validate and route documents and attachments for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-192 | Catalog and Item Master | Medium

The platform shall calculate and display role-based views for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-193 | Catalog and Item Master | Medium

The platform shall monitor and alert on historical versions for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-194 | Catalog and Item Master | Medium

The platform shall approve and audit AI recommendations for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-195 | Catalog and Item Master | Medium

The platform shall synchronize and reconcile master records for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-196 | Catalog and Item Master | Medium

The platform shall forecast and optimize status transitions for catalog and item master.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-197 | Procure-to-Pay Integration | High

The platform shall calculate and display compliance evidence for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-198 | Procure-to-Pay Integration | High

The platform shall monitor and alert on transactions for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-199 | Procure-to-Pay Integration | High

The platform shall approve and audit approval thresholds for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-200 | Procure-to-Pay Integration | High

The platform shall synchronize and reconcile documents and attachments for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-201 | Procure-to-Pay Integration | High

The platform shall forecast and optimize role-based views for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-202 | Procure-to-Pay Integration | High

The platform shall secure and retain historical versions for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-203 | Procure-to-Pay Integration | Medium

The platform shall import and export AI recommendations for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-204 | Procure-to-Pay Integration | Medium

The platform shall configure without code master records for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-205 | Procure-to-Pay Integration | Medium

The platform shall create and govern status transitions for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-206 | Procure-to-Pay Integration | Medium

The platform shall validate and route project and cost-code links for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-207 | Procure-to-Pay Integration | Medium

The platform shall calculate and display exceptions and overrides for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-208 | Procure-to-Pay Integration | Medium

The platform shall monitor and alert on integration events for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-209 | Procure-to-Pay Integration | Medium

The platform shall approve and audit mobile/offline records for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-210 | Procure-to-Pay Integration | Medium

The platform shall synchronize and reconcile compliance evidence for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-211 | Procure-to-Pay Integration | Medium

The platform shall forecast and optimize transactions for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-212 | Procure-to-Pay Integration | Medium

The platform shall secure and retain approval thresholds for procure-to-pay integration.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-213 | Supply Chain Analytics | High

The platform shall monitor and alert on master records for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-214 | Supply Chain Analytics | High

The platform shall approve and audit status transitions for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-215 | Supply Chain Analytics | High

The platform shall synchronize and reconcile project and cost-code links for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-216 | Supply Chain Analytics | High

The platform shall forecast and optimize exceptions and overrides for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-217 | Supply Chain Analytics | High

The platform shall secure and retain integration events for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-218 | Supply Chain Analytics | High

The platform shall import and export mobile/offline records for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-219 | Supply Chain Analytics | Medium

The platform shall configure without code compliance evidence for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-220 | Supply Chain Analytics | Medium

The platform shall create and govern transactions for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-221 | Supply Chain Analytics | Medium

The platform shall validate and route approval thresholds for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-222 | Supply Chain Analytics | Medium

The platform shall calculate and display documents and attachments for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-223 | Supply Chain Analytics | Medium

The platform shall monitor and alert on role-based views for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-224 | Supply Chain Analytics | Medium

The platform shall approve and audit historical versions for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-225 | Supply Chain Analytics | Medium

The platform shall synchronize and reconcile AI recommendations for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-226 | Supply Chain Analytics | Medium

The platform shall forecast and optimize master records for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-227 | Supply Chain Analytics | Medium

The platform shall secure and retain status transitions for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-228 | Supply Chain Analytics | Medium

The platform shall import and export project and cost-code links for supply chain analytics.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-229 | AI Procurement Intelligence | High

The platform shall approve and audit transactions for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-230 | AI Procurement Intelligence | High

The platform shall synchronize and reconcile approval thresholds for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-231 | AI Procurement Intelligence | High

The platform shall forecast and optimize documents and attachments for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-232 | AI Procurement Intelligence | High

The platform shall secure and retain role-based views for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-233 | AI Procurement Intelligence | High

The platform shall import and export historical versions for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-234 | AI Procurement Intelligence | High

The platform shall configure without code AI recommendations for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-235 | AI Procurement Intelligence | Medium

The platform shall create and govern master records for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-236 | AI Procurement Intelligence | Medium

The platform shall validate and route status transitions for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-237 | AI Procurement Intelligence | Medium

The platform shall calculate and display project and cost-code links for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-238 | AI Procurement Intelligence | Medium

The platform shall monitor and alert on exceptions and overrides for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-239 | AI Procurement Intelligence | Medium

The platform shall approve and audit integration events for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-240 | AI Procurement Intelligence | Medium

The platform shall synchronize and reconcile mobile/offline records for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-241 | AI Procurement Intelligence | Medium

The platform shall forecast and optimize compliance evidence for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-242 | AI Procurement Intelligence | Medium

The platform shall secure and retain transactions for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-243 | AI Procurement Intelligence | Medium

The platform shall import and export approval thresholds for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-244 | AI Procurement Intelligence | Medium

The platform shall configure without code documents and attachments for ai procurement intelligence.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-245 | Supply Chain Digital Twin | High

The platform shall synchronize and reconcile status transitions for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-246 | Supply Chain Digital Twin | High

The platform shall forecast and optimize project and cost-code links for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-247 | Supply Chain Digital Twin | High

The platform shall secure and retain exceptions and overrides for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-248 | Supply Chain Digital Twin | High

The platform shall import and export integration events for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-249 | Supply Chain Digital Twin | High

The platform shall configure without code mobile/offline records for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-250 | Supply Chain Digital Twin | High

The platform shall create and govern compliance evidence for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-251 | Supply Chain Digital Twin | Medium

The platform shall validate and route transactions for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-252 | Supply Chain Digital Twin | Medium

The platform shall calculate and display approval thresholds for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-253 | Supply Chain Digital Twin | Medium

The platform shall monitor and alert on documents and attachments for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-254 | Supply Chain Digital Twin | Medium

The platform shall approve and audit role-based views for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-255 | Supply Chain Digital Twin | Medium

The platform shall synchronize and reconcile historical versions for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-256 | Supply Chain Digital Twin | Medium

The platform shall forecast and optimize AI recommendations for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-257 | Supply Chain Digital Twin | Medium

The platform shall secure and retain master records for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-258 | Supply Chain Digital Twin | Medium

The platform shall import and export status transitions for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-259 | Supply Chain Digital Twin | Medium

The platform shall configure without code project and cost-code links for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.

P11-REQ-260 | Supply Chain Digital Twin | Medium

The platform shall create and govern exceptions and overrides for supply chain digital twin.

Acceptance: Authorized users can complete the function, required controls are enforced, all changes are timestamped, and the resulting record is traceable to tenant, company, project, user and source.
